

the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 12.5 million, and the number of people aged 75 and over from 4.5 million to 6.5 million (Office of National Statistics 1999).

There is a growing awareness of the need to address the needs of older people in the community, and the importance of the role of the general practitioner (GP) in this regard. The Department of Health (1998) has identified the need to improve the health of older people, and to ensure that they are able to live independently in their own homes for as long as possible. This has led to a number of initiatives, including the development of the 'Age Friendly' initiative, which aims to make the environment more accessible and friendly for older people.

The 'Age Friendly' initiative is a national programme that aims to make the environment more accessible and friendly for older people. It was launched in 1999, and has since been adopted by a number of local authorities and health authorities.

The initiative is based on the principle that older people should be able to live independently in their own homes for as long as possible. This requires a number of things, including: access to transport, access to services, and access to information.

The 'Age Friendly' initiative is a national programme that aims to make the environment more accessible and friendly for older people. It was launched in 1999, and has since been adopted by a number of local authorities and health authorities.

The first part of the paper discusses the importance of understanding the cultural context of the research. It highlights the need for researchers to be sensitive to the values and beliefs of the communities they are studying. This is particularly important in the field of education, where cultural differences can significantly impact learning outcomes. The paper then moves on to discuss the challenges of conducting research in diverse cultural settings. It notes that researchers often face difficulties in establishing rapport with participants and in interpreting their responses. To address these challenges, the paper suggests several strategies, including the use of local researchers and the development of culturally appropriate research instruments. The final part of the paper discusses the importance of ethical considerations in cross-cultural research. It emphasizes the need for researchers to obtain informed consent from participants and to ensure that the research is conducted in a way that respects the dignity and rights of all individuals.

the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 12.5 million, and the number of people aged 75 and over has increased from 4.5 million to 6.5 million (Office of National Statistics 2000). The number of people aged 65 and over is projected to increase to 15.5 million by 2020, and the number of people aged 75 and over to 8.5 million (Office of National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has identified the need to develop a 'new paradigm' for health care, which is based on the principles of prevention, promotion, and primary care. The Department of Health (1999) has also identified the need to develop a 'new paradigm' for health care, which is based on the principles of prevention, promotion, and primary care.
